

HEART FAILURE

Diagnosis

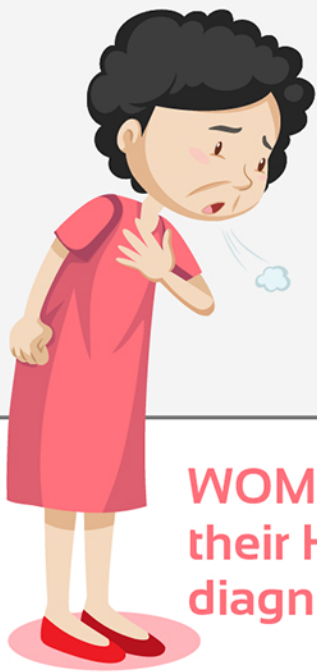

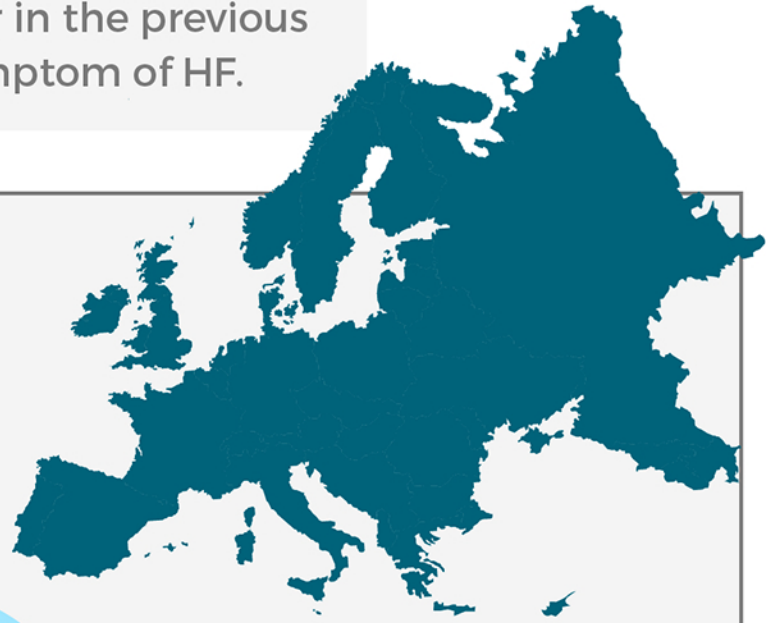

People may have symptoms of **heart failure** for **many years** before receiving a diagnosis, and management is often suboptimal.

79% of people are diagnosed in hospital following a rapid deterioration in their symptoms requiring emergency admission.

60% of people who have been diagnosed with HF in hospital, visited their Doctor in the previous 6 months, with at least 1 major symptom of HF.

3.9 million deaths in Europe per year.

15 million of people in Europe are estimated to be living with heart failure.

2

million hospital admissions per year in Europe.

WOMEN, are far more likely to have their Heart Failure (HF) condition diagnosed in hospital than men.

Cardio-HART™ is more likely to diagnose HF on the same day they visit their GP with symptoms.

Cardio-HART™

Breakthrough cardiac diagnostics for the early detection of Cardio-Vascular Disease [CVD], Heart Failure [HF], and all Heart Valves diseases [HVD].
